

Display Remote

+ Ideal for purists

For e-bikers looking for minimalist flair with all the functionality, the slimline Display Remote, which hugs the handlebar, is just the job. An LED strip display in a slender but rugged casing indicates battery charge, assist level, walk assist and error information.

All important functions such as the assist level, light and walk assist are stored in six easy-to-feel buttons. The smallest Display can be flexibly mounted to the handlebar on either the left or right and hugs it beautifully. This display is especially suited to riders who take a less-is-more approach to how their bike should look. It has a direct connection to the digital Service Tool, enabling quick and easy diagnosis and maintenance by certified dealers.

Product name	Display Remote
Part number	E41227
Display	LED / Optional connection to Display Central
Dimensions L/H/W (mm)	46 × 43 × 21
Diameter handlebar	22.2 mm
Weight	35 g
