

# Speed Sensor and Spoke Magnet Installation

## Description

These are the installation instructions for the speed sensor and memory magnet.

## Procedure

The speed sensor can only be mounted in the appropriate frame mounting bracket.

- Remove the protective cap (1).
- Place the speed sensor (2) into the frame mounting bracket on the left chain stay.
- Secure the speed sensor (2) with a Torx screw (3). Torque = 0.8 Nm.
- Put on the protective cap (1).
- Place the storage magnet (5) with the recess on the spoke.
- The flat side of the storage magnet (5) faces the speed sensor (2).
- Align the storage magnet (5) centrally with the line marking and secure it with the Phillips screw (4). Torque = 3 Nm.
- Lay the cable according to your own specifications and connect it to the drive unit. For more information, see the section entitled "Cable assignment" on page 11 of the "E-Bike System Installation Instructions."
